CASE STUDY

E-ZORG B.V.

EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security in the cloud » Incoming Filter » Outgoing Filter » Email Archiving » API » Clusterable » Synchronized » Scalable

Ransomware is a huge threat to businesses worldwide as it can install itself covertly on a victim's computer and execute a cryptovirology attack that will render files unusable (encrypted) until the victim pays a hefty sum. Tech savvy people have been burned in the past, thinking they can easily repel ransomware, but this type of malware is incredibly complex and requires analysis of huge data sets in order to efficiently combat it. To protect a company's assets from such malicious software, capable and scalable security systems must be employed. SpamExperts provides synchronized and clusterable email security systems under the form of Incoming & Outgoing Filtering, directly deployed via the Local Cloud, on the customer's (virtual) hardware, or on the Hosted Cloud, to put a stop to the annoyance of spam that may contain malware, viruses, ransomware, phishing attempts, and other such perils.

Quick Read

E-Zorg B.V., a KPN subsidiary, is the healthcare network for physicians, pharmacists and hospitals in the Netherlands. Founded in 2004, E-Zorg is the largest virtual private network in the country that connects healthcare institutions, professionals and patients to each other in a secure and reliable way.

Challenges

The world of defending against spam, malicious messages containing ransomware and phishing attempts is ever changing. Thus, E-Zorg B.V. took a new step in 2012 to overcome this threat by changing their old security software to a proper one. As phishing attempts and ransomware might result in sensitive data leaks, a good security measure had to be set in place to eliminate the risk of exposing crucial, end-user information.

Customer profile

Company	E-Zorg B.V.
Location	Amsterdam, Netherlands
Industry	Healthcare
Number of users	100,000 users Incoming 100,000 users Outgoing
Products in Use	Local Cloud, Incoming Filter, Outgoing Filter, Email Archiving
Website	www.ezorg.nl

Implementation

Finding a worthy security software to implement isn't an easy task, considering how many companies have been founded in the wake of the cybersecurity crisis. And going through all of them isn't an effective solution as those who send out malicious spam don't rest. So, back in 2012, upon a high recommendation, SpamExperts was brought into discussion. After testing the software and realizing its true force, the SpamExperts Incoming & Outgoing Filter products were installed via the Local Cloud deployment to protect E-Zorg's network of healthcare providers.

Benefits

Initially, the protection implemented in 2012 resonated throughout E-zorg's vast pool of clients by improving time spent manually adjusting email filters and providing the company and its users more control of the software. Furthermore, the critical issues that were threatening the healthcare network under the form of ransomware were efficiently avoided with the proper use of SpamExperts' email security suite. Now, almost 5 years later, thanks to excellent results and a great business relationship, E-Zorg B.V. has upgraded its license to protect over 20,000 healthcare providers that use their services and qualified to enter an elite partnership with SpamExperts.

Target Reached

"Great support and all-around nice people," says Tom van Leeuwen, Networking and Security at E-Zorg, "SpamExperts was recommended to us way back in 2012 and we don't regret for a second going with them. We've been their customers for a long time now and we can honestly say that we have always received awesome support and great services, all wrapped around an affordable price tag. Recently, we decided to upgrade our license to protect all of our users against unwanted & malicious messages!"
